

## Common Issues in .xlsm Files

### Security warning: Macros has been blocked or disabled

Try the following methods:

- Change macro security settings in Excel: [Link](#)
- Enable or disable macros in Microsoft 365 files: [Link](#)
- Trusting documents on a network: [Link](#)
- Unblocking a File with "Unblock" Option: Right-click the file → select **Properties** → in the **General** tab, check **Unblock** → click **Apply**.

### Developer tab not displayed on the Ribbon

Show Developer tab: [Link](#)

### “Refresh All Data” button does not work

Make sure the Design Mode under Developer tab is not selected.

## Common Issues in .pbix Files

### Data fails to load: “File or Folder: Could not find a part of the path”

Make sure theFolderPath parameter is correct.

- Copy the path of the project folder that contains **Main** folder.  
Ex: D:\Projects\Undervalued Stock Scanner
- Open a **.pbix** file
- **Home** tab → **Transform data** drop-down → **Edit parameters** → Click on the **FolderPath** parameter → Paste the current folder path to replace the default folder path → Click **OK** → Click **Apply changes** in the popup at the top.

Data may not be loaded correctly the first time. Try to refresh data again if there's an error.

### Formula.Firewall in Power Query

Set the privacy level options to ignore the privacy levels when combining data: Go to **File** → Click **Options and settings** → **Options** → Click on **Privacy** under **GLOBAL** → Make sure to choose “Always ignore Privacy Level settings”
